Accept Payments Online

Create a Hosted Payments Page (HPP) in minutes and begin accepting payments

What is an HPP?

The Hosted Payments Page is a secure checkout page that captures payment information from your customers. It is the fastest way to create a secure, online way to get paid by card or check. The page can link to your website, or just add a 'pay now' or 'donate' button to your invoices, which link to your HPP. It is perfect for service organizations, professionals and non-profits.
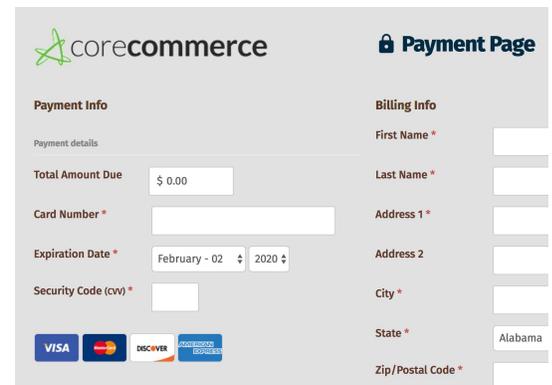

Why was the new HPP created when many solutions already exists?

❏   Merchant's need an online form that's easy to setup without requiring a programmer
❏   Easy to deploy on web site or on your invoicing system
❏   An HPP that works on any device is required - consumers want to pay with mobile
❏   Connecting other applications like your gateway and accounting system are time savers

This HPP is different from others in the market

❏   Implementing it does not require any programming, it is a drag and drop online form

❏   Merchant login allows the biller to manage the design of the page and pay buttons. No html or design work by a web designer is needed, saving you time and money. View, search and download the transaction history.

❏   Notifications: When a transaction occurs, the HPP will send an email to a user at your company & email a receipt to the customer.

❏   Custom fields (up to 10) can be entered and captured on your form which enhances gateway reporting and payment reconciliation.

❏   Dropdown boxes offer your clients choices on the form. Hidden fields can be used to capture unique information about the transaction

❏   Make fields required or optional for payer.

❏   Automate data feeds into the form: i.e., customer number, invoice #, UserID, $ amount, line item (sku) information.

❏   Webhooks send a JSON data feed with all transaction data (including hidden fields) back to other applications, like your accounting (billing or ERP) system.

❏   Integrates with other applications, such as Quickbooks

Other valuable features include:

- ❏ For payers; credit cards and optionally, e-checks

- ❏ Easily integrate a payment button with your invoicing or accounting system - copy/paste the code or the button image.

- ❏ Recurring billing

- ❏ Multiple MID's can be used on one HPP (ex, group physician practices)

- ❏ Fraud prevention tools: velocity restrictions, reCAPTCHA, min & maximum payment amounts.

- ❏ Consumer login to see transaction history, manage cards on file (June 2017)

- ❏ Surcharge / convenience fees (June 2017)

Connect the HPP to your website or invoicing system

Upon saving your design and custom payment buttons, just paste the HPP html code into your website. Copy and insert the payment button on your invoices. Embed the HPP inside an iframe on your current website or use it with an 'app'.

Reduce PCI scope

Payment data never resides in your system. CoreCommerce is PCI-DSS 3.2 certified.

What does it cost? Clients of CoreCommerce pay a flat rate 2.90% + $0.30 per transaction plus $5.00 per month. Recurring billing option adds $5/mo. Setup fees only apply for integration services.

Talk to us about integrating the HPP into your enterprise systems or for a demonstration, contact: Michael Thompson, mthompson@corecommerce.com, 615-550-5516
